---

At a live event in Tokyo, Sony on Thursday unveiled what many had come to call the PlayStation Portable 2, its long-awaited, all-new handheld video game console. Known officially as the "Next Generation Portable," the device will be available this holiday season. Sony has not yet said what the new PSP will cost.

According to CNET sister site Gamespot.com, the new device will come in a brick form factor and feature a 5-inch OLED display with four times the resolution of current-generation PSPs. It has touch pads on both the front and the rear and dual micro analog joysticks. It also has both front- and rear-facing cameras and will use a Flash-based memory card. It will also offer 3G, Bluetooth, and Wi-Fi connectivity, according to GameSpot. On-stage in Tokyo, Sony's Shuhei Yoshida said the new device boasts PlayStation 3-quality graphics.
